SUMMARY

Full-stack software engineer with backend depth, experienced in building and shipping production-grade systems. Currently building the Inventory Control module of a two-plant manufacturing ERP with FastAPI, PostgreSQL, and Next.js. Previously built the backend infrastructure for Intervyou.me, an AI-powered career platform with 8,000+ users, recognized by NVIDIA Inception and Google for Startups. Comfortable across the full stack, from data modeling and API design to responsive frontend implementation. Computer Science student at Universitas Negeri Malang (GPA 3.91/4.00).

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Go, PHP, SQL

Back-End: FastAPI, Node.js, Express.js, NestJS, Gin, Laravel, SQLAlchemy, RESTful API Design

Front-End: React.js, Next.js, HTML5, CSS3, TailwindCSS, ShadCN/UI

Databases: PostgreSQL, MySQL, MongoDB · Schema Design & Query Optimization

Tools: Git, GitHub, Docker, Playwright, Prisma, Google Maps API, Gemini API, OWASP ASVS

WORK EXPERIENCE

Software Engineer

CV Solusi Cipta Media

Malang
Jul 2026 – Present

- Building the Inventory Control module of a web-based ERP for a two-plant automotive component manufacturer, replacing a procurement process previously run on dozens of Excel workbooks; own features from requirements analysis through schema design, APIs, UI, and end-to-end testing.
- Designed an MRP-style calculation engine that turns approved production plans into per-supplier purchase orders, accounting for BOM requirements, current stock, in-transit orders, safety stock, and packing rules.
- Built a background worker that tracks sea and air shipments through browser automation (Playwright) and updates invoice ETAs automatically, replacing manual checks on carrier websites.
- Implemented per-plant data isolation across usage, stock, open POs, and invoices, so one plant's orders no longer mask another plant's shortages.
- Validated every calculation against users' legacy Excel workbooks before release and ran end-to-end tests on real data.

Stack: Python · FastAPI · PostgreSQL · SQLAlchemy · Playwright · Next.js · TypeScript

Software Engineer

Intervyou.me · PT Intervyou Labs Indonesia

Malang
May 2025 – Jul 2026

- Architected and shipped the backend infrastructure for Intervyou.me, an AI-powered career development platform serving 8,000+ users.
- Designed RESTful APIs and database schemas covering core product modules: user sessions, mock interview flows, AI scoring, and CV analysis.
- Integrated Google Gemini API to enable real-time natural language analysis of interview responses, providing structured feedback at scale.
- Owned deployment, monitoring, and performance optimization, maintaining system reliability as the user base scaled.
- Contributed to the product's acceptance into NVIDIA Inception and Google for Startups programs.

Stack: Next.js · TypeScript · MySQL · Google Gemini API · TailwindCSS

Application Security Intern

PT PLN (Persero)

Jakarta
Mar 2026 – Jun 2026

- Drove the migration of PLN's internal application security standard from OWASP ASVS v4.0.3 to v5.0.0, reviewing and adapting 400+ requirements to align with organizational infrastructure and policy context.
- Conducted security verification sessions across 3 to 4 internal applications through collaborative code reviews, assessing compliance against authentication, session management, and access control requirements.
- Identified implementation gaps and communicated concrete remediation expectations to development teams based on the updated internal security standard.

Stack: OWASP ASVS · Secure Code Review · Security Compliance

Teaching Assistant, Information Systems

Universitas Negeri Malang

Malang
Sep 2025 – Dec 2025

- Mentored student teams building web applications for real-world clients, guiding requirements analysis, architecture decisions, and full-stack implementation.
- Reviewed technical deliverables (system logic, architecture, and code quality) and provided structured feedback to improve implementation.

- Set up and managed deployment servers for student applications, resolving infrastructure issues during testing and demo phases.

Stack: Laravel · React.js · SQL · Deployment

Full Stack Developer

PT. Transpo Indonesia Mandiri

Malang

Apr 2025 – Sep 2025

- Led end-to-end development of a vehicle rental and tour package booking platform covering multiple vehicle types and custom travel packages.
- Engineered a dynamic pricing model with Google Maps API that calculates travel distance in real time to automate fare computation, replacing manual estimation.
- Built RESTful APIs and designed relational database schemas to manage bookings, vehicle inventory, user data, and pricing logic.

Stack: Next.js · TypeScript · Node.js · MySQL · Google Maps API · TailwindCSS

PROJECTS

Simakin, AI-Powered AI-Quran Learning Platform

2025

- Developed a platform that evaluates Quranic recitation and memorization accuracy by transcribing, analyzing, and validating user audio through the Gemini API.

Stack: Remix · Prisma · PostgreSQL · Google Gemini API

Safera, AI Content Moderation Tool

2025

- Built a streamer donation platform with an integrated AI content filter that detects and blocks messages containing gambling promotions before they appear on stream.

Stack: NestJS · Next.js · Google Gemini API · MySQL

EDUCATION

Universitas Negeri Malang

Aug 2023 – Aug 2027

B.Sc. Computer Science · **GPA 3.91 / 4.00**

SMA Integral Ar-Rohmah

Jul 2020 – Jun 2023

Science Department (MIPA)

ORGANIZATIONAL EXPERIENCE

Core Team, Web Development Division

Malang

GDGoC (Google Developer Group on Campus) UM

Oct 2024 – Jun 2025

- Developed and delivered technical learning modules covering HTML, CSS, JavaScript, and React for the campus developer community.
- Co-organized Tech Talk, a technical event with 180+ participants, handling speaker coordination and activity flow.
